

ComicCraft-AI-AI Powered Comic Story Creator

Project: ComicCraft-AI - AI Powered Comic Story Creator

The brainstorming phase was used to identify an interesting and useful project idea using Generative Artificial Intelligence. The team discussed how AI could be used to transform a simple story idea into an attractive comic.

Problem Identified

Creating a complete comic manually requires time, creativity, story writing, panel planning and image preparation. Beginners may find it difficult to combine all these tasks.

Proposed Idea

ComicCraft-AI was proposed as an AI-powered application that accepts a user's story idea and generates an original comic story arranged into comic panels.

Key Ideas Discussed

Convert a simple text prompt into a comic story.

Use Generative AI to create characters, scenes and dialogue.

Allow the user to select the number of panels.

Provide different comic styles.

Present the generated story in an easy-to-understand comic format.

Final Idea

The final idea was to develop ComicCraft-AI as a simple and user-friendly application that turns imagination into an AI-generated comic.
