

## ComicCraft-AI-AI Powered Comic Story Creator

Project: ComicCraft-AI- AI Powered Comic Story Creator

The design phase defines the structure of ComicCraft-AI and explains how the different components communicate with each other.

### System Flow

User → Frontend Backend/API Gemini AI→ Comic Generation

### Comic Output

### Major Modules

1. User Interface Module collects the story prompt and user selections.
2. API/Backend Module - receives requests and controls the application flow.
3. AI Integration Module communicates with the Gemini AI service to generate story content.
4. Comic Service Module - processes the generated story and prepares comic information.
5. Layout Builder Module - organizes content into comic panels.
6. Image Generation Module - handles visual generation where supported.
7. Export Module - prepares the generated comic for output/export.

### Design Goal

The system is designed in a modular way so that each major task can be handled separately. This makes the application easier to understand, test, maintain and improve.
