

ComicCraft-AI-AI Powered Comic Story Creator

Project: ComicCraft-AI - AI Powered Comic Story Creator

Testing is performed to check whether ComicCraft-AI works correctly and whether the different components communicate properly.

Testing Areas

Application startup testing-checks whether the application starts without errors.

API testing-checks whether the backend endpoints respond correctly.

Input testing-checks whether user prompts and selections are accepted correctly.

AI integration testing checks communication with the Gemini AI service.

Comic generation testing-checks whether the requested story is converted into comic content.

Error testing checks how the application responds to invalid input or API errors.

Frontend testing-checks buttons, forms and display of results.

Sample Test Case

Input: "A shy girl discovers a magical cat that can talk."

Expected Result: The system should process the prompt and generate comic story content divided into the selected number of panels.

Testing Objective

The main objective is to identify errors, verify expected behaviour and ensure that the final application provides a usable comic-generation experience.
